## **Obstetric Fistula** Robert F. Zacharin

Obstetric fistula is as old as mankind. While the incidence has diminished progressively with better health care in Western societies, the situation has changed little in many developing countries. Fistulae of pelvic organs, often monstrous defects, still are a major complication of child-birth causing misery to uncounted young women, and if they cannot find help in one of the very few hospitals with trained specialists, they became urological cripples losing everything: family, home and job. The magnitude of the problem is illustrated by some figures given by Reginald and Catherine Hamlin-about 700 fistula patients treated each year-a total of over 10,000 cases operated upon in their fistula hospital in Addis Ababa, Ethiopia. Most of these injuries could be prevented by better health care at the village level as some studies have shown conclusively. The incidence of fistula is an indicator of the standard of health and obstetrical care. The author of this book-Obstetric Fistula-is an internationally known Australian gynaecologist who for many years has been interested in all aspects of gynaecological urology, especially urinary stress incontinence, other forms of involuntary loss of urine, and associated gynaecological conditions. He has devised a number of new operations to treat pelvic defects. Robert Zacharin's interest in obstetric fistula was a consequence of his surgical activity in developing countries.
