**Contrasts and Effect Sizes in Behavioral Research: A Correlational Approach** Robert Rosenthal, Ralph L. Rosnow, Donald B. Rubin

Contrasts are statistical procedures for asking focused questions of data. Researchers, teachers of research methods and graduate students will be familiar with the principles and procedures of contrast analysis included here. But they, for the first time, will also be presented with a series of newly developed concepts, measures, and indices that permit a wider and more useful application of contrast analysis. This volume takes on this new approach by introducing a family of correlational effect size estimates. By returning to these correlations throughout the book, the authors demonstrate special adaptations in a variety of contexts from two group comparison to one way analysis of variance contexts, to factorial designs, to repeated measures designs and to the case of multiple contrasts.

**From reader reviews:**

**John Drew:**

As people who live in the particular modest era should be update about what going on or information even knowledge to make these people keep up with the era and that is always change and make progress. Some of you maybe will probably update themselves by looking at books. It is a good choice in your case but the problems coming to a person is you don't know which you should start with. This Contrasts and Effect Sizes in Behavioral Research: A Correlational Approach is our recommendation to make you keep up with the world. Why, as this book serves what you want and need in this era.

**Roberta Bourland:**

Information is provisions for those to get better life, information presently can get by anyone from everywhere. The information can be a knowledge or any news even restricted. What people must be consider any time those information which is from the former life are difficult to be find than now's taking seriously which one is acceptable to believe or which one often the resource are convinced. If you receive the unstable resource then you obtain it as your main information there will be huge disadvantage for you. All of those possibilities will not happen inside you if you take Contrasts and Effect Sizes in Behavioral Research: A Correlational Approach as the daily resource information.

**Robert Carroll:**

Reading a guide can be one of a lot of action that everyone in the world likes. Do you like reading book and so. There are a lot of reasons why people love it. First reading a publication will give you a lot of new data. When you read a publication you will get new information mainly because book is one of numerous ways to share the information as well as their idea. Second, reading a book will make you actually more imaginative. When you examining a book especially hype book the author will bring someone to imagine the story how the figures do it anything. Third, you can share your knowledge to some others. When you read this Contrasts and Effect Sizes in Behavioral Research: A Correlational Approach, you could tells your family, friends and also soon about yours publication. Your knowledge can inspire others, make them reading a publication.

**Mary Adam:**

As a university student exactly feel bored to help reading. If their teacher questioned them to go to the library or even make summary for some e-book, they are complained. Just very little students that has reading's soul or real their passion. They just do what the teacher want, like asked to go to the library. They go to generally there but nothing reading seriously. Any students feel that studying is not important, boring in addition to can't see colorful images on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this era, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore , this Contrasts and Effect Sizes in Behavioral Research: A Correlational Approach can

make you experience more interested to read.
